General information	1
Update of the InLoox database	3

General information

This document describes the steps required to successfully update an InLoox 6 database.

The update of a prior release of InLoox 6 to InLoox 6.5 or higher requires the update of the InLoox database. It is necessary to back-up the InLoox database before the update, since it is not possible to downgrade back to the earlier version.

Please note that the support of Outlook 2000 and Outlook XP has ended.

If you use Outlook 2000 or Outlook XP, do not update to InLoox 6.5 and higher.

Proceed with the following steps to back-up the database.

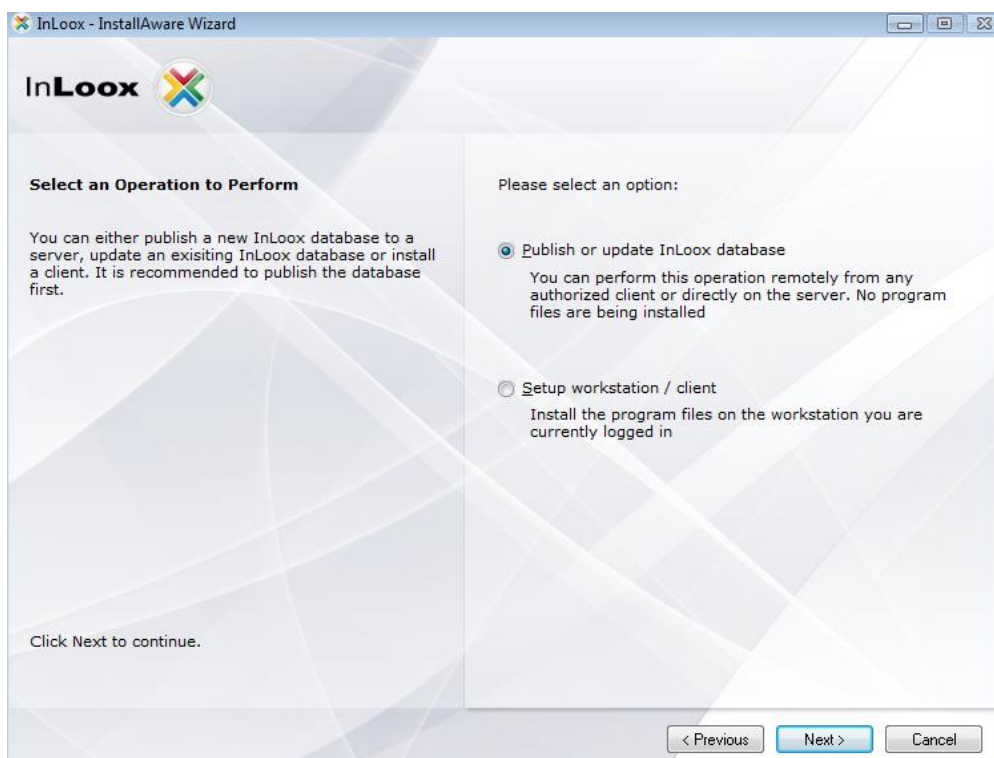

1. Ensure that there are no users currently connected to the database
2. Connect to the InLoox database and make a complete backup.
All supported database manufacturers provide a description and the tools for backing up data
3. Update the InLoox database as described in the following chapter.

Update of the InLoox database

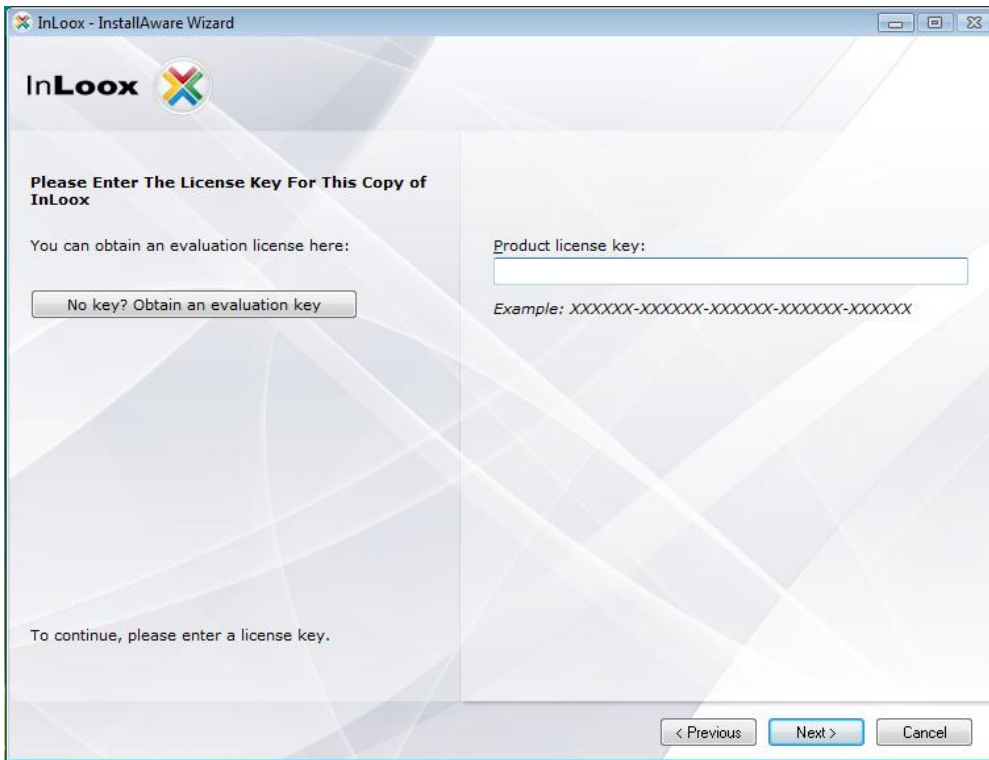

1. Start the setup file and choose the language for installation
2. Click on **Next**

3. Choose **“Publish or update InLoox database”**

4. Enter your license key

InLoox 

Please Enter The License Key For This Copy of InLoox

6. Choose “Update existing InLoox database”

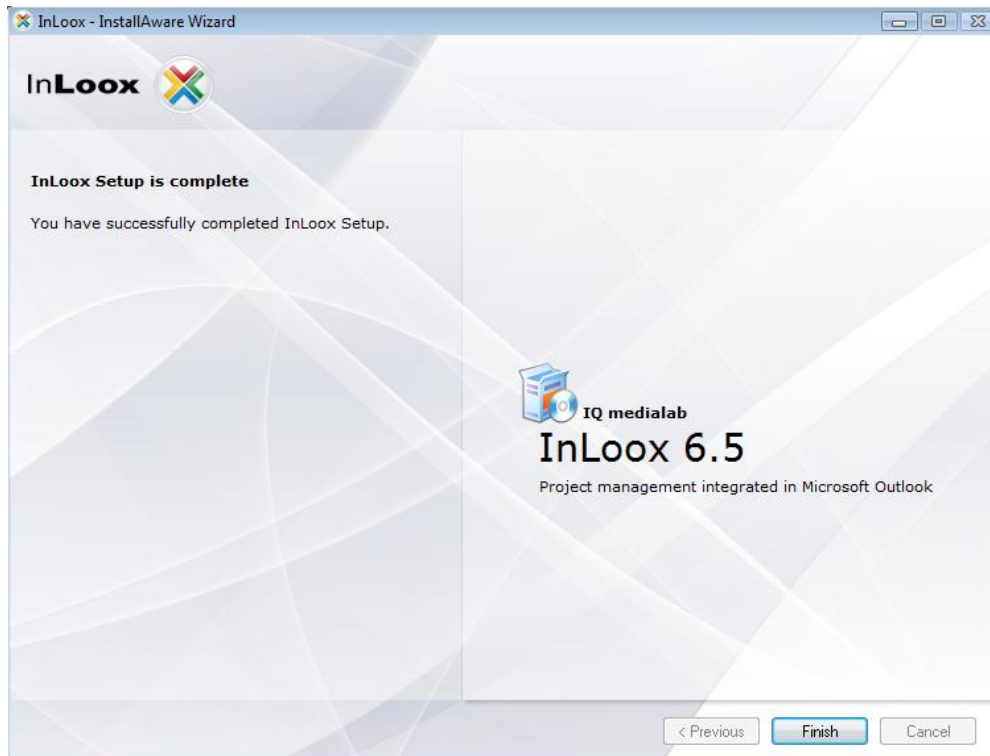

The screenshot shows the 'InLoox - InstallAware Wizard' window. The title bar reads 'InLoox - InstallAware Wizard'. The InLoox logo is in the top left. The main area is titled 'Select an Operation to Perform'. It contains two paragraphs of text: 'You can either publish a new InLoox database to a server or update an existing database to a newer version.' and 'You can perform both operations remotely from any authorized client or directly on the server. No program files are being installed.' Below this is the instruction 'Click Next to continue.' On the right, under 'Please select an option:', there are two radio buttons. The first is 'Publish new InLoox database' with the description 'Choose this option if you want to set up a new InLoox database'. The second is 'Update existing InLoox database' (highlighted with a dashed border) with the description 'Choose this option if you want to migrate your InLoox database to a newer version. Updating is necessary if you want to update your InLoox clients from one major version to another.' At the bottom right are three buttons: '< Previous', 'Next >', and 'Cancel'.

7. Enter the data to connect to your InLoox database and click on **Next**

The screenshot shows the 'InLoox - InstallAware Wizard' window at the 'Update Existing Database' step. The title bar reads 'InLoox - InstallAware Wizard'. The InLoox logo is in the top left. The main area is titled 'Update Existing Database'. It contains a paragraph: 'Please enter the server and database name and your credentials. Setup will then update your InLoox database.' Below this is an information icon followed by the text 'Setup will modify your existing database!' and a bold warning: 'It is strongly recommended to backup your database before you continue.' Another paragraph follows: 'After the update procedure older versions of the InLoox client will no longer be able to connect to the database.' Below this is the instruction 'Click Next to continue.' On the right, there are several input fields: 'Server type:' with a dropdown menu showing 'Microsoft SQL Server'; 'Server name:' with a dropdown menu and a 'Browse' button; 'Database name:' with a text field containing 'inloox'; 'Authorization:' with two radio buttons: 'Integrated Security' (selected) and 'Username and Password:'. Below the 'Username and Password' radio button are two text fields: 'User name:' and 'Password:'. At the bottom is an 'Additional parameters (optional):' text field. At the bottom right are three buttons: '< Previous', 'Next >', and 'Cancel'.

8. The setup now updates the InLoox database automatically. Please note that this process can take several minutes depending on the amount of data in the database.
9. The update is finished

The InLoox Clients should, now, be updated. To do this, start the setup file on the client computer and choose "Workstation-/Client-Installation". There is no need to uninstall the previous version, the setup routine will take this into consideration.
