InLoox Web App – Project Management in the Internet

Stay connected to your team – no matter where you are

## Connect Your Project Teams over the Internet

InLoox Web App turns your InLoox enterprise server into a fully-fledged online project platform. The web client offers a whole host of functions for planning, coordination, and communication, all in a familiar and user-friendly interface. InLoox Web App can be used by many Internet browsers, such as Internet Explorer and Mozilla Firefox.

Do away with the technical boundaries and integrate mobile users, field workers, and external partners. InLoox Web App provides a powerful, secure and scalable infrastructure for professional project management via the web.

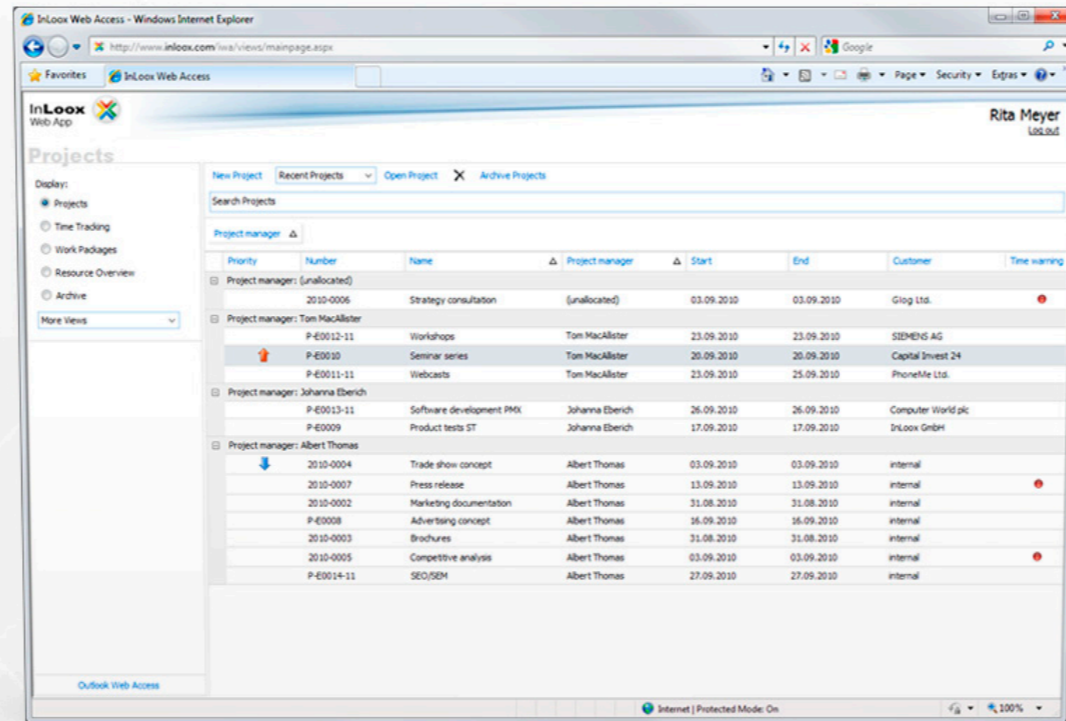

Mobile Phone

Mac + PC

PDA

Project Manager:

*„With InLoox Web App all projects are available anytime and anywhere – that’s what I call business support.“*

### Budgeting

Keep an online overview of planned and actual expenses and revenues. Easily create budgets, calculations, quotations and invoices. It is also possible to maintain regular billing, based on time tracking.

### Report Designer

At the push of a button, the highly flexible report designer creates reports such as project summaries, budget lists, expense reports, and plan/actual comparisons in a variety of file formats, such as Microsoft Excel, Microsoft Word, HTML, PDF, and many more.

## Reliable, Practical – Instantly Ready for Operation

**InLoox Web App is completely web-based and therefore platform-independent.**

There is nothing to install on the client machine and, even, Microsoft Outlook is not needed. You can use it anywhere you want – in an internet cafe, at a customer’s site or on any internet-capable device and smart phone.

Access to individual projects and to specific functions depends on the security configuration. The connection to the project server is encrypted. InLoox Web App uses Microsoft Internet Information Server and is compatible to Microsoft Exchange Server, SharePoint Portal Server, SharePoint Portal Services, and Microsoft Windows Server.

InLoox Web App uses the InLoox server data base. This not only reduces maintenance and administration, but also ensures that the data is always synchronized.

### Project Time Planning

See the tasks and the resource utilization in graphical form. InLoox Web App improves the reliability of your planning and scheduling and simplifies the coordination of your projects. Any changes to the project plan can be communicated to the team. The project team is always up-to-date on task status and important milestones.

### Project Time Tracking

Record work hours of current projects in real time. Maintain a consistent and complete documentation of activities for such things as billing. Create a continuous digital project workflow by communicating recent activities directly to all team members. Avoid media breaks, duplications, and unnecessary administrative work.

### Document Management

Manage project documents over the internet with InLoox Web App in a virtual project room. Authorized users have access to the current status of the project documentation. Emails, Microsoft Office documents and any other files can be saved in the central project folder via the browser. Documents can also be marked with, for example, a processing status.

## Stay connected to your team – no matter where you are

More than 1,000 clients and 25,000 users in Europe, North America, Asia and Australia rely on InLoox. 20% of all companies listed in the German Stock Index (DAX) use it as their standard software. More and more companies of all sizes and market sectors are finding InLoox to be their efficient solution for project management.

Some companies, that already use InLoox:

InLoox meets Microsoft compatibility requirements and quality standards
